digivu+

Portable Driver Card & Vehicle Unit Download

Low Cost Combination for Driver Card & Vehicle Unit Download

Key Features

- A fast & efficient download tool
- Downloads vehicle unit and driver card data
- Customisable settings to optimise performance
- Intelligent internal file management
- Helps you to stay legally compliant
- Easy to use and understand

Vehicle Unit & Driver Card Combo

The power of digivu has been combined with our card reading technology to give you a low cost yet highly efficient way to download vehicle unit and driver card files. The digivu+ card reader is powered by an independent battery source which in turn powers the digivu.

The digivu will store all of the driver and vehicle unit files until you connect it to a PC or digipostpro, when all of the data can be automatically downloaded by our digiconnect software. The digivu is supported by all the major UK analysis providers. No additional software or configuration, beyond the standard digivu setup, is required to support digivu+.

Intelligent Filing

digivu manages its own files including archiving and cleaning up partial downloads caused by any power interruptions. As it has its own file system, it cannot be written to inadvertently by viruses.

Real-time Clock

The digivu+ has its own internal clock which means that driver card downloads are accurately time-stamped allowing law enforcement to see when the card was last downloaded.
