CONVEY

digifob
The Simplest Driver Card Solution

Ensuring Driver Compliance with EU Drivers Hours Law

Key Features

- Clear and logical display of driver data
- Encourages driver compliance and safety
- Allows managers to check compliance
- Helps avoid infringements
- Built-in EU rules engine

Keeping it Simple

digifob is by far the simplest way to display data from a digital tachograph driver card. digifob helps drivers comply with EU regulations and helps ensure that both they and other road users are safe and compliant.

The digifob contains a comprehensive EU rules engine using the same technology as law enforcement authorities across Europe.

Driver Safety & Working Time

Drivers and Driver Managers are able to consistently check driver compliance and in turn ensure that they and other road users are safe.

By summarising the current shift and each week, digifob can assist in working time calculations.

Easy to use

The digifob will summarise your driver data in a chronological and accessible way. It works quickly to display summarised data allowing the user to scroll through and understand wat the data means.
