digivu Vehicle Unit Download Solution

The Fastest Vehicle Unit Download Tool Available

Key Features

- A fast & efficient way to download vehicle data
- Customisable settings to optimise performance
- Intelligent internal file management
- Helps you to stay legally compliant
- Easy to use and understand

Fastest download key on the market

digivu is the fastest tachograph download key on the market. Using the supplied USB adaptor, digivu is connected to a PC to upload the data using our free digiconnect software.

digivu helps you remain compliant as you periodically download vehicle unit data. Our digiconnect software allows you to customise your download settings to select which data and for how many days.

Intelligent and Intuitive

With its built in intelligence, it keeps an internal database of all vehicle downloads so that next time you download from a specific vehicle it will only download the required data since the last download.

Intelligent Filing

digivu manages its own files including archiving and cleaning up partial downloads caused by any power interruptions. As it has its own file system, it cannot be written to inadvertently by viruses.

Use with digipostpro

The digivu is designed to be used in conjunction with the digipostpro which is our all-in-one device for collecting both driver card and vehicle unit data. digipostpro replaces the PC and card reader scenario and can be placed in remote locations using either a LAN, 3G or WiFi connection.
